# Business ICT + business **nbn**™ Enterprise Ethernet

Powering productivity and growth

BUSINESS**ICT** AUSTRALIA | business **nbn**™ accredited adviser

Businesses of all sizes require fast, reliable internet to operate effectively. Business ICT Australia delivers business-grade networks, IP telephony, unified communications and managed services to Australian businesses. We provide vendor-agnostic connectivity, working with your existing carrier and technology to install fast and reliable business **nbn**™ Enterprise Ethernet.

business **nbn**™ has changed the face of the Australian telecommunications landscape by removing the cost barriers to high-speed internet for many small and medium businesses. That means companies of all sizes can enjoy the productivity benefits that come with symmetrical upload and download speeds and dedicated bandwidth. With Business ICT Australia as your business **nbn**™ Enterprise Ethernet partner, you'll experience 99.95% availability, real-time network monitoring and automatic threat detection.
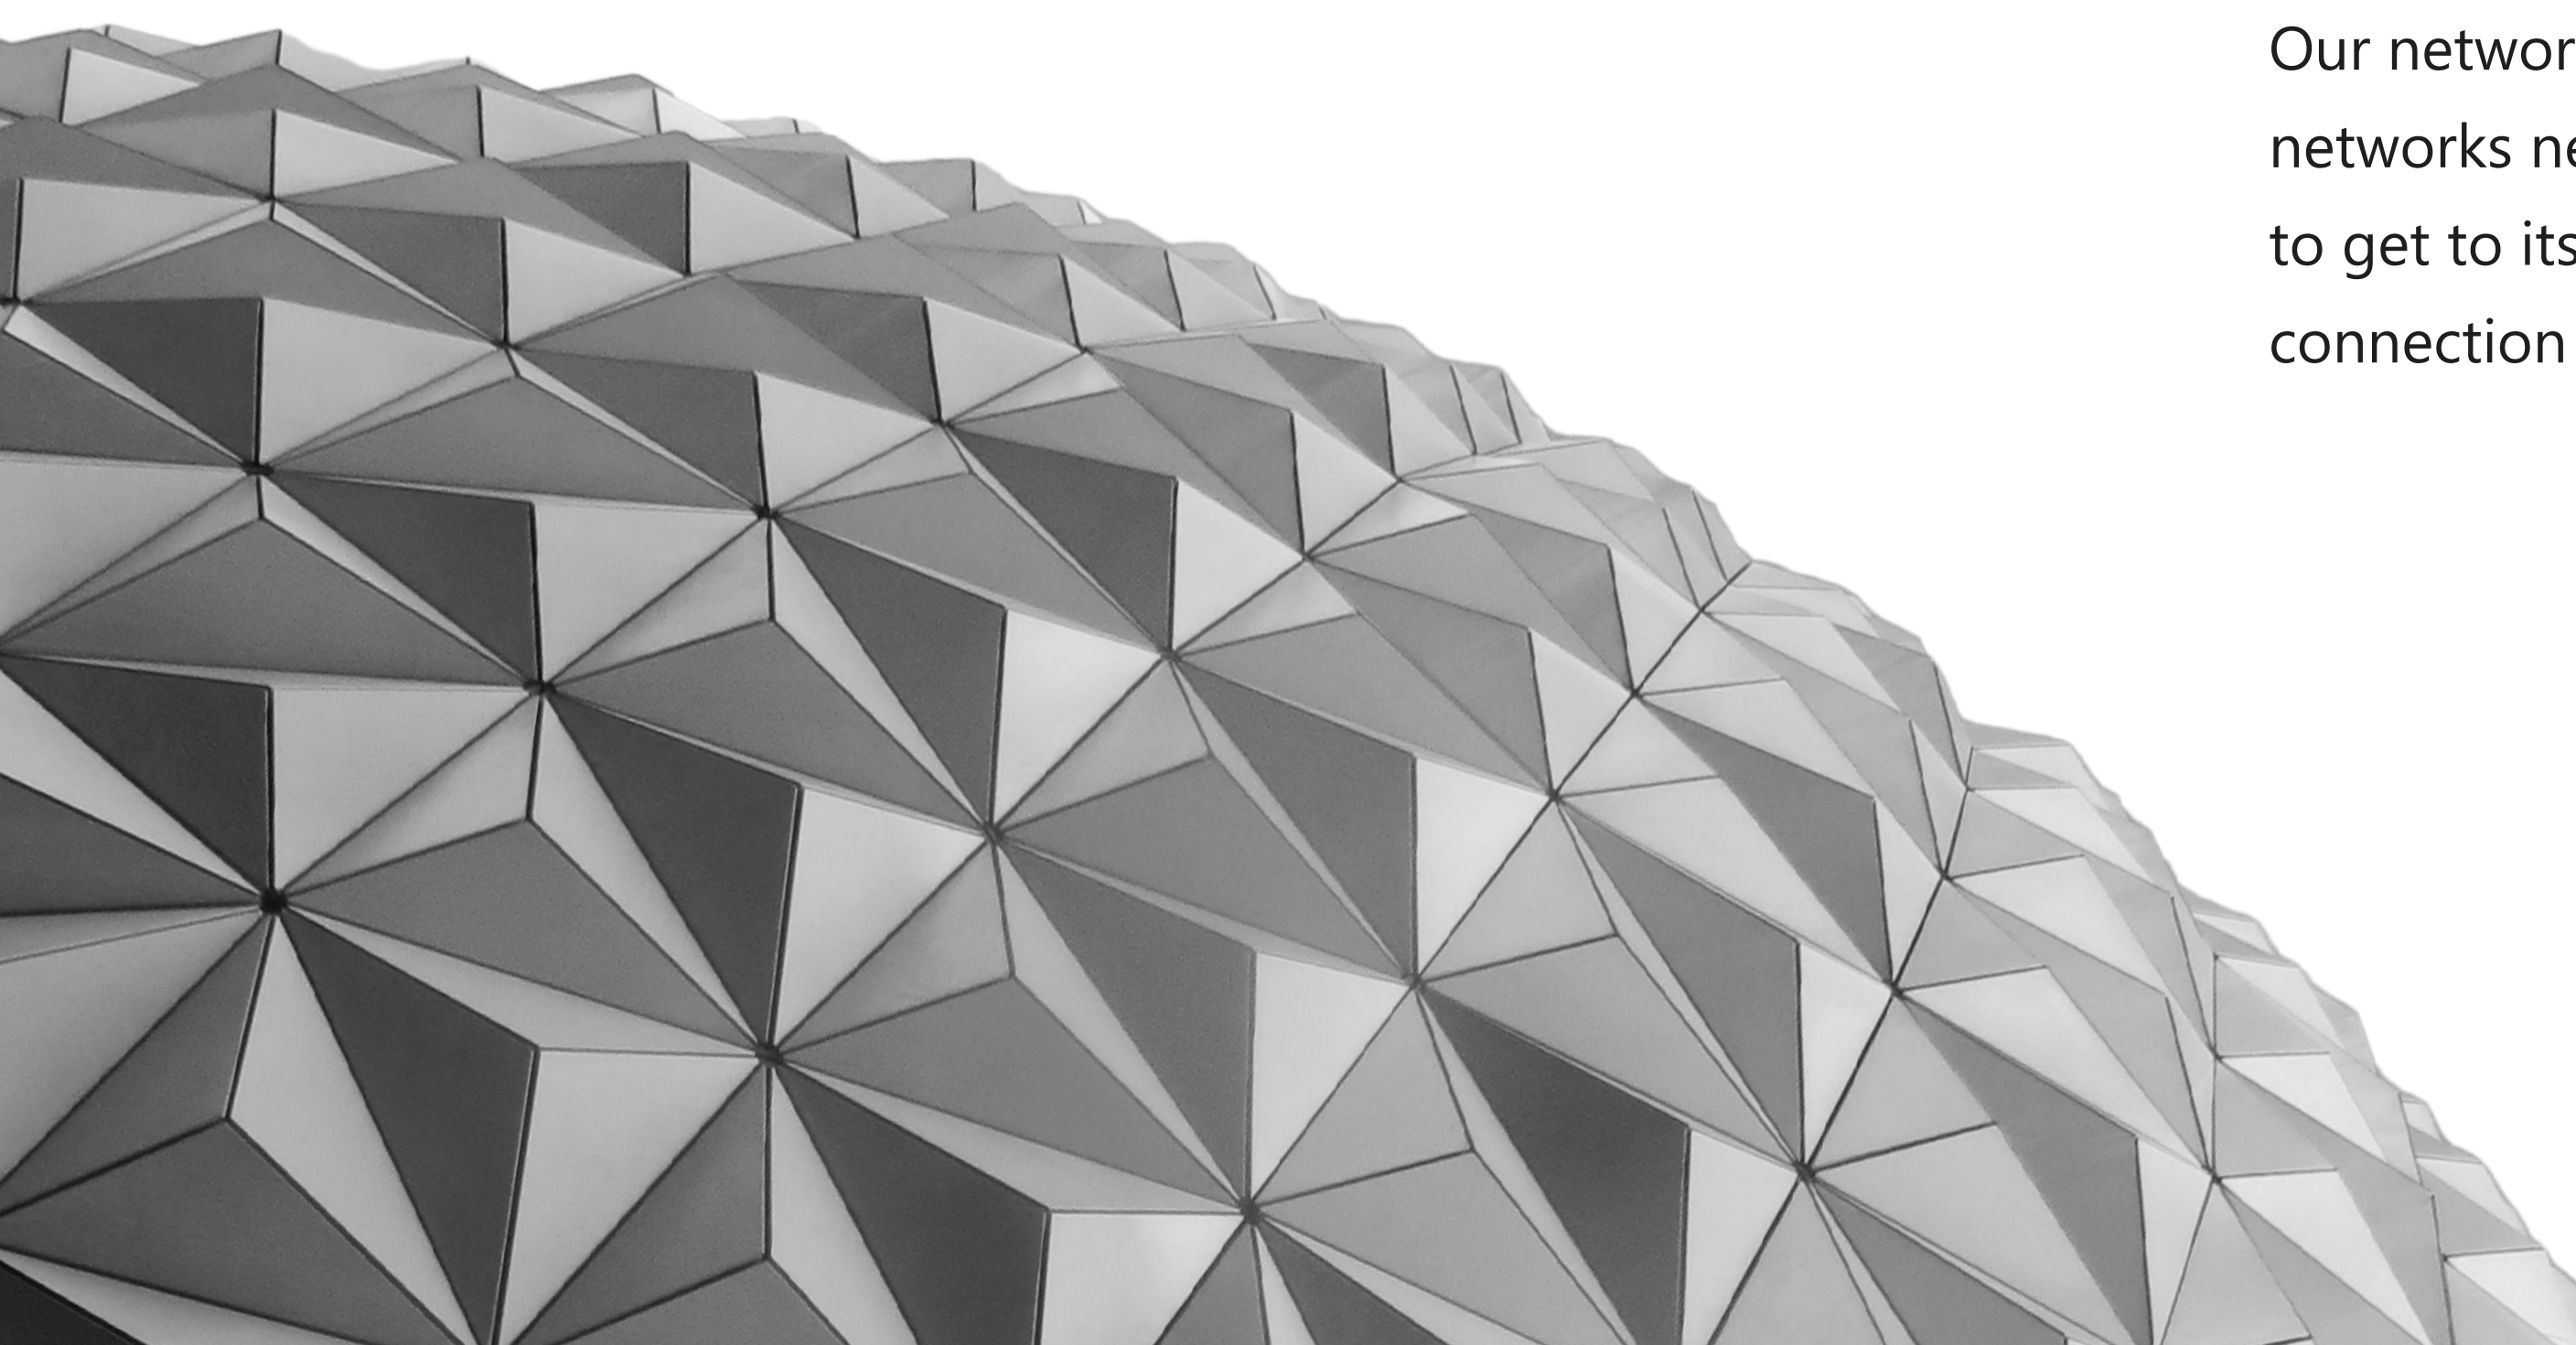

*This means that unlike other service providers, we can offer unlimited downloads — our network can handle the traffic, with download speeds up to nearly 1Gps.*

## Australia's most connected network

Business ICT Australia provides access to the most connected network in Australia with direct connections to the UK, USA, Europe, Japan, NZ, Dubai, Hong Kong, Shanghai and Singapore. The **nbn**™ network national rollout has unlocked access to fibre in metro and regional areas. Business ICT Australia can help you get connected, even at premises which have previously been difficult to access.

Our network is also the most peered network in Australia. While other networks need to direct data traffic through multiple different networks to get to its destination, our network establishes a direct, one-to-one connection with content providers.

# Reliable and secure

When you're running applications that are time-sensitive and require consistent bandwidth, those that run on the cloud, or that rely on upload speed as much as download speed (like video conferencing), you need a high performance, reliable fibre network.

*This is where Business ICT Australia + business **nbn**™ Enterprise Ethernet comes to the fore. Our core network has never been down, giving you peace of mind for your business-critical operations.*

Our network isn't just reliable - it's also secure. Business ICT Australia protects your business from threats with a managed firewall and real-time network monitoring, ensuring your business has the latest firmware and updates, managed by our team of IT professionals.

## Flexible

business **nbn**™ Enterprise Ethernet is designed so that as your business changes – such as an increase of employees, or the adoption of more bandwidth-heavy applications – it can be scaled based on your needs. At Business ICT Australia we only charge per head, with one, easy-to-read monthly bill or online MyAccount portal for all your ICT: secure internet, unified communications, mobile and managed services.

Meanwhile, business **nbn**™ Enterprise Ethernet's priority data option is designed to provide more consistent performance for your business-critical applications, by prioritising your nominated applications ahead of other residential and business data using the business **nbn**™ network.

## Enabling digital transformation

Businesses today face a myriad of challenges including security, cloud adoption and migration, moving to hosted voice solutions, understanding what is happening on their networks, and accessing fast, fibre internet. Business ICT Australia can help support and simplify this journey, so you don't get left behind in the digital transformation race.

# Why Business ICT Australia?

## A trusted partner

We deliver business grade data, voice and cloud solutions,
designed for Australian businesses.

## Vendor agnostic

We develop and recommend solutions for your individual requirements,
providing carrier diversity for ultimate redundancy.

## Premium service

Our solutions help businesses to control costs, stay connected and keep
information secure. When you need support, our onshore team will answer
your call in under 90 seconds, providing a first call resolution more often.

## Predictable monthly bill

Simplify your ICT management with one monthly bill, or through your MyAcount
online portal with no hidden surprises. We grow with you, so you'll only pay for
what you are using today.

## Official business **nbn**™ accredited adviser

We are able to offer unlimited data downloads with business-grade **nbn**™,
as well as better levels of service, speeds and fault restoration.
